# CONTENTS

## PART I: THEORY (TEORIA)
1. J. Dźwierzyńska: A Direct Descriptive Construction of an Inverse Panoramic Image 3  
2. J. Dźwierzyńska: The Object Panorama Construction with Computer Aid 9

## PART II: GRAPHICS EDUCATION (DYDAKTYKA)
1. K. H. Lewandowski: Instructional Effectiveness of Directional Arrows Used in the Author's Method of AutoCAD Teaching 15

## PART III: APPLICATIONS (ZASTOSOWANIA)
1. M. Koźniewski: Thickness Analysis of a Saddle 25  
2. T. Wieja: Evaluation of Methods Used for Mapping the Geometry of Underground Spatial (3D) Structures in the Course of Revitalisation 33  
3. A. Żaba: Classification of Shapes of Roofs with Flat Surfaces 43  
4. L. Żakowska, M. Piwowarczyk: Visualization in Transportation – the Effect of Field of View on Driver’s Perception of Objects in Dynamic Road Environment Simulation 51

## PART IV: HISTORY OF DESCRIPTIVE GEOMETRY (HISTORIA GEOMETRII WYKREŚLNEJ)
1. A. Žaba: Drawings of Friedrich Bernhard Wernher (1690-1776) and Geometry. Part 1: General Remarks 63  
2. N. Kaygorodtseva: Professor Vladimir Yakovlevich Volkov (1939-2016) 71
PROFESSOR VLADIMIR YAKOVLEVICH VOLKOV (1939-2016)

Natalia KAYGORODTSEVA

Omorg State Technical University
644050 Omsk, pr. Mira 5, OmGTU, RUSSIA

On January 31, 2016, at the age 77, died a famous scientist and a wonderful person, Professor Vladimir Yakovlevich Volkov. Professor Vladimir Volkov was the member of editorial board of The Journal Biuletyn of Polish Society for Geometry and Engineering Graphics.

A kind, helpful, highly intelligent, unique person, a specialist of the highest level. He was a doctor of technical sciences, professor, teacher, colleague, the founder of the Russian scientific school multidimensional enumerative geometry.

Professor Volkov formulated and developed the field of research "axiomatic theory of construction of graphical models of multidimensional spaces multifactor processes and systems". He solved a number of fundamental scientific and applied problems in the field of descriptive geometry, engineering and computer graphics. The results allowed to develop a fundamentally new technology for preparation of students in graphic disciplines at technical universities. He set up a formalized mathematical apparatus calculating the geometric conditions of incidence, partial parallelism and perpendicularity. That was the basis for a multidimensional enumerative geometry. The latest outcomes served as a foundation for the creation of synthetic geometry using an axiomatic basis.

The practical results of the study of Professor Volkov associated with the development of optimization models for determining the road surfacing composition in the road construction. The analysis of multi-component systems, environmental, traditional and non-traditional methods of joining materials in light industry was made possible through Professor Volkov’s theory.

He did a great work for promoting original research and theory development in the field of applied geometry. He prepared a number of lecture series on multidimensional synthetic enumerative geometry, which he gave in the departments of teacher training in different cities of Russia and abroad.
He was creator and leader of the Russian Scientific School multidimensional
enumerative geometry theory, which resulted in promoting by him in person of a group of 10
completed PhD theses, and five DSc theses. Professor Volkov and his students have been
developed the theoretical geometric modeling theory based on the symbolic calculus
formalization of geometric conditions.

Professor Volkov was a chairman of the Dissertation Council for awarding academic
degrees of Doctor of Technical Sciences and PhD of technical sciences, in the major 05.01.01
"Engineering geometry and computer graphics". Over the three terms of office
the Dissertation Council held 42 defenses of PhD and DSc theses. All decisions on awarding
degrees of applicants were approved by the Higher Attestation Commission of the Russian
Federation.

Professor Volkov had been working for over 50 years in the universities of the city
of Omsk (Russia), giving himself to the development of original research and applied
geometry theory. According to the results of research and development Vladimir Volkov
published over 150 papers, monographs, textbooks, inventions, and patents. Under
the editorship of Professor Volkov was published seven interuniversity collection of scientific
papers.

He was awarded with the badge "Inventor of the USSR", the badge "Honorary Worker
of Higher Professional Education of Russia" (1999), "Drummer 11th Five-Year Plan".
Professor Volkov was a corresponding member of the Siberian Branch of the Russian
Academy of Sciences of Higher School, the winner of the Soros Foundation. He was awarded

Vladimir Yakovlevich Volkov represented Russia in the Organizing Committee
of the International Association for Geometry and Graphics. He participated in several
international conferences as a member of the International Organizing Committee
and Lecturer: the United States (Miami, Boston, Austin), Japan (Tokyo), France (Paris),
China (Guangzhou), Poland (Krakow), Brazil (Bahia), Portugal (Lisbon), Ukraine (Kiev),
South Africa (Johannesburg), Germany (Dresden), Canada (Montreal), Latvia (Riga), Austria
(Innsbruck).

Vladimir Yakovlevich had always distinguished its high capacity for work, active life
position, sensitivity, attentiveness. Despite serious heart disease, he had been working until
the last day.

Vladimir Yakovlevich was not only a great scientist, but versatile and enthusiastic
person. He was engaged in gardening, jewelry cuttings planted fruit trees, grapes bred in
Siberia. And he kept bees and treated all his honey.

Memory of Vladimir Yakovlevich will remain forever in our hearts, not only as a great
scientist, teacher, but also as generous, responsive person with this real Siberian nature.
