PROBLEM OF SCANNED MAPS IN COORDINATION THE TECHNICAL WORKING PLAN PROCESS.

The unit of administrative office gives the map to project - aims. The investor usually gets the map as a printed cloth. The scanning and deformation of paper influence on a quality of the bitmapped pictures. In result a design engineer gets a deformed electronic map. Without suitable tooling of this map Zespół Uzgodnień Dokumentacji Projektowej (another administrative unit to coordinate the design) disputes correctness of submitted project.

The report presents the solution of the deformed bitmapped pictures problem by the calibration in one of the system available on the market.
